MARATHON TRAINING PLAN

BREAK 3:00

Want to break three hours in the marathon? This plan will help you do it. The program starts with 32 miles a week and a 10-mile long run, and peaks three weeks before the race with 56 miles and a long run that's 22 miles. Most weeks feature one day of rest and six days of running, and include workouts like intervals and tempo runs to help you get fitter and faster. Each key workout includes detailed instructions on pace and distance.

WORKOUT KEY

▶ Rest

Take the day off! You can use this time to relax on the couch, do some meditation, or incorporate light mobility work or an easy yoga class. These days give your body a chance to recover from the hard work you put in, which allows you to progress, and they get you ready for the next run.

▶ Easy Run

These workouts should feel just as they sound: easy. You want to run at an effort that allows you to have a conversation. If you're huffing and puffing, you're going too fast. Try to start them extra slow and light so you can finish strong. These allow you to increase your time on feet and weekly mileage, building endurance while lowering risk of injury. They'll also strengthen your lungs and your legs. You can also sub in cross-training on optional easy run days. For a pace goal, aim for no faster than 8:10/mile.

▶ Miles With Intervals

These are your speed workouts. They're designed to get you faster via interval training. You'll start with easy running to warm up and end with easy running to cool down. Follow the workout prescriptions to gain the most benefits (don't overdo it!), and know some days you won't hit the paces perfectly. Make sure you recover between each interval, jogging or walking.

▶ Hills

Run the day's mileage on the hilliest route you can find. Don't worry too much about the length or grade of the hills. Just get a variety of inclines and descents. Hills help you boost your leg and lung power. Lean slightly forward from the ankles and keep your chest tall on the uphills. On the downhills, think "light, quick steps." Don't let your feet slap the pavement, and don't brake with your legs.

▶ LSD: Long Slow Distance Run

These workouts are all about building endurance and teaching you to run farther so you can finish your race feeling strong. Whenever you're pushing your body farther, it's extra important to start at a pace that feels conservative. That way, you have the energy to finish feeling good. So start slower than you think you need to, and remember you should be able to hold a conversation as you run. If a pace target is helpful, aim for no faster than 8:10/mile, but don't get tied to your watch.

▶ Tempo

You'll see tempo miles mixed into a few of your long runs. You'll run these faster than goal marathon pace, aiming for 6:26/mile, which will make your pace on race day feel easier. These efforts should feel comfortably hard, about a 6 or 7 on a scale of 1 to 10 rate of perceived exertion, with 10 being all-out effort.
