

10 - WEEK

HALF MARATHON TRAINING PLAN

BREAK 1:45

This plan was designed for runners who want to break 1:45 in the half marathon. It is geared for runners who have averaged 30 miles per week or more for at least six months and who want to develop speed over a longer distance. Each week features one or two days of rest and five or six days of running. That includes tempo runs, intervals, and long runs, which start at 10 miles and peak at 16 miles.

WORKOUT KEY

▶ Rest or Cross-Train

Take the day off! You can use this time to relax on the couch, do some meditation, or incorporate light mobility work or an easy yoga class. These days give your body a chance to recover from the hard work you put in, which allows you to progress, and they get you ready for the next run.

▶ Easy Run

These workouts should feel just as they sound: easy. You want to run at an effort that allows you to have a conversation. If you're huffing and puffing, you're going too fast. Try to start them extra slow and light so you can finish strong. These allow you to increase your time on feet and weekly mileage, building endurance while lowering risk of injury. They'll also strengthen your lungs and your legs. You can also sub in cross-training on optional easy run days. For a pace goal, aim for no faster than 9:37/mile.

▶ Miles With Intervals

These are your speed workouts. They're designed to get you faster via interval training. You'll start with easy running to warm up and end with easy running to cool down. Follow the workout prescriptions to gain the most benefits (don't overdo it!), and know some days you won't hit the paces perfectly. Make sure you recover between each interval, jogging or walking.

▶ LSD: Long Slow Distance Run

These workouts are all about building endurance and teaching you to run farther so you can finish your race feeling strong. Whenever you're pushing your body farther, it's extra important to start at a pace that feels conservative. That way, you have the energy to finish feeling good. So start slower than you think you need to, and remember you should be able to hold a conversation as you run.

▶ Tempo

You'll see tempo miles mixed into a few of your long runs. You'll run these faster than goal half marathon pace, aiming for 7:42/mile, which will make your pace on race day feel easier. These efforts should feel comfortably hard, about a 6 or 7 on a scale of 1 to 10 rate of perceived exertion, with 10 being all-out effort.
